

IAE MONOGRAPHS

VOLUME 11

**ENERGY LOSS OF SWIFT IONS
IN POLYCRYSTALLINE TARGETS**

Frank Nickel

Institute of Atomic Energy, Otwock-Świerk 2007

Author

Frank Nickel – Gesellschaft für Schwerionenforschung mbH, Darmstadt, Germany

Scientific Editor

Prof. dr hab. Stefan Chwaszczewski

Technical Editor

Grażyna Swiboda

Wydaje Instytut Energii Atomowej – OINTEA
Nakład 60 egz. Objętość: ark. wyd.3,5; ark. druk. 4,8
Data złożenia maszynopisu wrzesień 2007.
Pr 1341, 13.12.2006

ISBN 978-83-926175-0-1

To Annette in memoriam

CONTENTS

I.	INTRODUCTION	1
II.	EXPERIMENTAL	3
	II.1. The accelerator facility at GSI: UNILAC, SIS and ESR	3
	II.2. The fragment separator FRS as an experimental set-up for high-precision energy-loss measurements of relativistic heavy ions	5
	II.3. Rotating target wheel for the production of superheavy elements	7
	II.4. Target temperature measurement with a pulsed electron beam	10
	II.5. A device for backscattering measurements with energetic heavy ions	12
	II.6. Preparation of isotopically highly-enriched thin targets by sputtering	12
	II.7. Detection of gold atoms by neutron activation	13
	II.8. SQUID magnetometer for magnetization measurement on gadolinium	14
III.	SPUTTERING AND RADIATION DAMAGE	15
IV.	SCATTERING OF SWIFT HEAVY IONS	19
	IV.1. Scattering at large angles	19
	IV.2. Scattering at small angles (multiple scattering)	22
V.	RANGE AND RANGE STRAGGLING	25
VI.	TARGET TEMPERATURES	29
VII.	ELECTRONIC ENERGY LOSS OF SWIFT HEAVY IONS	35
	VII.1. Energy loss measurements with 1.2 MeV/u heavy ions	35
	VII.2. Energy loss measurements with relativistic heavy ions up to 1 GeV/u	36
VIII.	ELECTRONIC ENERGY LOSS OF IONS IN A FERROMAGNETIC TARGET	39
	VIII.1. Experiments with α particles	39
	VIII.2. Experiments with relativistic Bi projectiles	41
IX.	CONCLUSIONS	47
X.	SUGGESTION FOR FURTHER STUDIES	49
	Appendix	50
	References	51
	Acknowledgements	53
